NEW

Our classic product now made from 100% FSC® recycled paper!
aroFOL® classic brown, now even more environmentally-friendly

100% FSC® recycled paper

As of now, our proven classic product among air bubble bags is available made from 100% FSC® recycled paper in brown. We provide you with our usual high product quality without charging any extra costs.

Recycled paper protects our environment

Not a single tree needs to be cleared for the production of FSC® recycled paper as it is made from 100 % waste paper. This protects our forests and is an important contribution to maintain the biodiversity. But that's not all: important resources are saved during production due to the fact that less chemicals, energy and water are needed for processing waste paper.

Air bubble film with high recycled content

In combination with air bubble film with high recycled content and the print with water-based colours (Aquaprint®), you get a product made from at least 80% recycled material.

Advantages of aroFOL® classic brown

- 100% FSC® recycled paper (FSC-C014176)
- air bubble film with high recycled content
- in total made from at least 80% recycled material
- water-based colours
- 100% climate-neutral production and delivery
- usual high product quality without any additional costs
- upon request 100% climate-neutral product possible

Your contribution to protect the environment

Enhance your image and use the positive aspect of environmental protection for you and for our environment while keeping the constant high quality!

More environmentally-friendly products

Climate protection belongs to practiced company philosophy at VP. Therefore we offer a lot more climate-friendly products. Find out more about our wide product range and our commitment to environmental matters on our homepage.
